

SentralQ SOC Incident Report

Case 537B8DB1-260 | Need Review | Type C - Analyst Review Required

CASE OVERVIEW

Case ID	537B8DB1-260
Report Type	Type C - Analyst Review Required
Status	Need Review
Generated At	2026-05-16 13:48:18
Source IP	100.2.2.6
Destination IP	10.0.0.5

EXECUTIVE SUMMARY

At 2026-05-16 13:48:18, SentralQ classified traffic from 100.2.2.6 to 10.0.0.5 as IP Protocol Scan with confidence 75.33%. The event severity was assessed as Medium, the realtime source was AI Detection Engine, and the final enforcement state was Need Review. The case was recorded under Type C - Analyst Review Required.

THREAT CLASSIFICATION

Threat Classification	IP Protocol Scan
Severity Classification	Medium
Operational Status	Need Review
Report Type	Type C - Analyst Review Required
MITRE ATT&CK Mapping	Discovery / Network Service Discovery

ATTACK TIMELINE

Original Event Time	2026-05-16 13:48:07
SOC Detection Recorded	2026-05-16 01:48:07 PM
Report Generated	2026-05-16 13:48:18
Operational Status	Need Review
Realtime Source	AI Detection Engine

SOURCE / DESTINATION ANALYSIS

Source IP	100.2.2.6
-----------	-----------

Source Context	Externally routable address observed by the SOC pipeline
Destination IP	10.0.0.5
Destination Context	Private address observed inside the monitored network boundary
Target System	10.0.0.5
Protocol	TCP

GEOIP INTELLIGENCE

City	Unknown
Country	US
Location	US
ISP	Verizon Business
Usage Type	Fixed Line ISP
Map Coordinates	40.5828, -73.9532
Location Map	https://www.openstreetmap.org/?mlat=40.5828&mlon=-73.9532#map=5/40.5828/-73.9532

THREAT INTELLIGENCE ENRICHMENT

AbuseIPDB Score	0
VirusTotal Reputation	0
Threat Tags	No malicious tags returned
Threat Summary	AbuseIPDB 0; VirusTotal 0

MITRE ATT&CK MAPPING

Discovery (T1046)	Network Service Discovery
-------------------	---------------------------

SEVERITY / CONFIDENCE ANALYSIS

Displayed Confidence	75.33%
Raw Probability Score	75.33%
Automation Threshold	80.00%
Final Decision	Need Review

Decision Basis	The model remained below the 80% automatic containment threshold with probability 0.7533. This event therefore required analyst intervention, resulting in the operational state Need Review.

PACKET / PROTOCOL DETAILS

Src Port	45092
Dest Port	80
Proto Num	6
App Proto Num	0
Bytes Total	1500000
Pkts Total	25000
Flow Age	2.5
Pkts Per Sec	10000
Bytes Per Sec	600000
Avg Pkt Size	60
Pkt Ratio	0.0
Byte Ratio	0.0
Tcp Syn	1
Tcp Ack	0
Tcp Psh	0
Tcp Fin	0
Tcp Rst	0

SPLUNK CORRELATION DETAILS

Source	AI Detection Engine
--------	---------------------

AI DETECTION REASONING

- Anomalous IP Protocol: 6

CONTAINMENT / BLOCK STATUS

Final Status	Need Review
--------------	-------------

Blocked By	Pending Analyst Decision
Status Code	need review
Status Alias	N/A
Containment Narrative	The model remained below the 80% automatic containment threshold with probability 0.7533. This event therefore required analyst intervention, resulting in the operational state Need Review.

MANUAL INTERVENTION RATIONALE

The model remained below the 80% automatic containment threshold with probability 0.7533. This event therefore required analyst intervention, resulting in the operational state Need Review.

ANALYST NOTES

- The event remains in review posture. Analysts should validate whether the activity merits manual containment or case dismissal.
- Evidence references in this report are generated from the live SOC pipeline and should be correlated with firewall, Splunk, and endpoint telemetry before case closure.

EVIDENCE SUMMARY

Case ID	537B8DB1-260
Report File	MedaShield_Incident_20260516_134818_100_2_2_6.pdf
Attack Type	IP Protocol Scan
Observed Indicators	100.2.2.6 -> 10.0.0.5 over TCP
Primary Evidence	Packet features, enrichment data, realtime alert payload, and generated report artifact

REALTIME DETECTION METADATA

Event Timestamp	2026-05-16 13:48:07
Report Generated At	2026-05-16 13:48:18
Source Channel	AI Detection Engine
Target System	10.0.0.5
Realtime Metadata	Protocol=TCP; Confidence=75.33%; StatusCode=need review

RECOMMENDED ACTIONS

- Validate the attacker against external blacklists and retained internal watchlists.
- Inspect correlated telemetry for lateral movement, repeated probes, credential abuse, or downstream impact.
- Review firewall, Splunk, and segmentation controls for durable containment policy updates.
- Preserve packet, host, authentication, and application evidence for analyst follow-up and case closure.
